

NEW FEDERAL CLEAN AIR ACT

REGULATIONS HAS CREATED AN \$11,000,000,000 OPPORTUNITY

Twin Falls-Clatskanie, Oregon

Columbia Pacific Bio-Refinery

Have you ever heard of Clatskanie?

It has been described as a "Norman Rockwell" picturesque small town nestled in green hills & valleys in northwest Oregon.

It is also home to our furthest U.S. based client, the former Columbia Pacific Bio-Refinery. Opened for Ethanol production, they added Crude Oil operations and received an Air Containment Discharge Permit to protect the environment from excessive pollution.

There are two main places where there are emissions-the storage tanks and the marine vessel loading operation. The permit requires these vapors to be captured and sent to a control device which significantly reduces the of pollution that goes into the air.

That is where we helped them measure those rates with an ALL-IN-ONE mass flow metering solution...

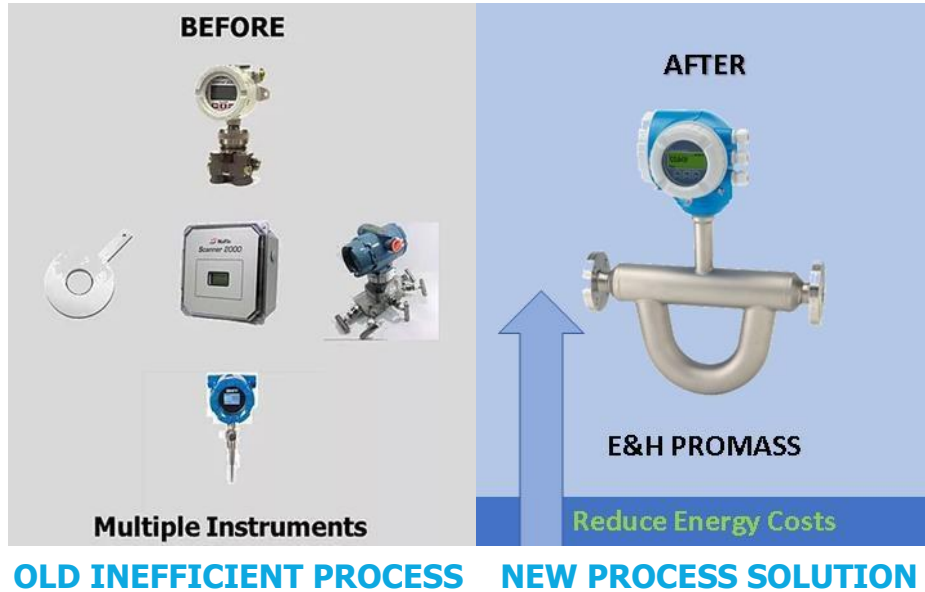

But in order to see what solution works best for you we recommend an on-site audit of your facility.

What do you receive in this audit?

It won't be an estimated **\$74,200,000.00** project that Louisville Gas & Electric officials shared with the Kentucky Public Service Commission to lay 12-miles of natural gas pipeline in Bullitt County with a primary feed to the Jim Beam Bourbon facility to increase production.

Nor will it be **\$7,964,000.00**, the average production expansion trend for 2023 that Christianson & Associates, PLLP wrote in their Economics of Production Expansion Report.

The most one solution would ever be for an application on a 4" line would be **\$68,348.00** for a Coriolis Meter & 3-day on-site analysis to include travel expenses to Clatskanie, Oregon.

But...

We offer a 3-day audit of your facility that solves the devastating measurement mistake you are presently dealing with for

*****UP TO 90% OFF*****

We come in and audit your:

- Main Natural Gas Feed line
- Process Heaters
- Compressed Air System
- Pure & Mixed Gas Systems
- Calibration Validation on Process
- Pump & Blower Systems
- Environmental Systems
- Gas Analyzers & GC's
- Preventative Maintenance

and provide you a report with a solution that would pinpoint inaccuracies to better control your process.

You cannot control what you don't measure

3-day Audit plans starting at \$4899.00* plus travel expenses
